

# PCI Labs Facility Report 2021 Environmental Update

**PCI LABS ENVIRONMENTAL GHG EMISSIONS:**  
30% IS BASED ON OUR FACILITY AND 70% FROM THE PRODUCTION, TRANSPORT, USE AND RECYCLING OF OUR PRODUCTS.

**PCI Labs Notes:**

1. Reduced Lighting energy consumption by increasing insulation and installing LED based lighting fixtures, under motion sensors, throughout facility.
2. Installed intelligent control systems to optimize the performance of heating, ventilation and cooling systems against ambient weather conditions.
3. PCI Labs operations are not water intensive. Our water is for sanitary and landscape purposes.  
We planted hybrid supergrass that looks great and requires less water and bought electric lawn mowers. Area will be converted to organic gardens for employees and neighbors.
4. Eliminated on all new products and re-use old, secondary packaging.
5. Implemented solvent Kaizen Blitz events which resulted in substantial reductions in Solid and Hazardous Waste generation.
